

X-Ray Repair Planning

This simple, yet powerful, preproduction process is all about eliminating future delays and creating continuous repair flow by putting an effective repair planning method in place. In basic terms, X-Ray Repair Planning® is aimed at identifying all the collision damage on a vehicle so repairs can proceed from start to finish without interruption, thus making it an excellent way reduce cycle-time.

Owners, managers and technicians, from collision centres large or small, can all benefit from learning about X-Ray Repair Planning®.

Your MVP Business Solutions team can help you discover the key elements of effective repair planning and how to make critical decisions for what needs to occur, how it will occur, when it will be done, and where things take place. Responsibilities for each task are discussed and identified to ensure the whole team is fully engaged in the process. The result is a collision centre team that has a clear understanding of what X-Ray Repair Planning® is and a solid execution strategy for making it happen on a day-to-day basis.

Break free of the common problems affecting many collision repairers and use X-Ray Repair Planning® to accelerate your cycle-time faster than you thought possible!

Available as part of PPG's comprehensive support package, the MVP Business Solutions program is aimed at helping customers to improve performance across the full spectrum of business activities.
